EXPERIENCE

Innovative Dynamic Solutions – Katy, TX

Aug. 2023-Dec. 2024

Freelance Software Developer

- Built software and systems for the company, including Databases (PostgreSQL), virtual private networks, and simulation software (C++, C#)
 - Managed and coded embedded systems of oil drills, used testing and debugging methodologies to ensure an optimized solution
 - Utilized Scrum methodology by collaborating with multiple team members to deliver optimized solutions in software and systems
 - Implemented a ticketing system to streamline communication within the team (JavaScript, HTML, CSS), leading to improvements in issue resolution and enhancing overall development and operational efficiency
-

PROJECTS

Vehicle and Aircraft Simulator – C#, C++

- Supplied a 3D multi-use tool for pilots and drivers practice, including Airplanes, Cars, Trucks, and Helicopters
- Collaborated using agile development, participating as Product Owner, Scrum master, and developer, communicating with different members to create a product that exceeded project requirements

Book Reader Web App – JavaScript, HTML/CSS, C#

- Generated a web application to convert and store PDFs, enhancing data encoding and decoding capabilities
- Applied problem-solving skills and agile principles as a group to design a scalable infrastructure, ensuring the app's capability for future development and growth in 16-week sprint of team development

Meeting Organizer App – C#

- Developed an application enabling users to organize and schedule meetings through a user-friendly interface
- Designed and tested an app as a team to ensure reliable performance and user satisfaction in managing appointments using email

Habit tracker– Python, SQL

- Created a habit tracker app with an endpoint (REST API) to help create habits hosted on a SQL server
 - Produced a cost-effective way to interact with a database, along with ensuring database safety and integrity
-
